Chapter 1

The highlands of Atla

This area of land is entirely mountainous with the major city of Stormheight occupying the tallest peak in the region. Smaller towns and villages dot the mountain valleys around the region. The mountainous terrain is rich in aether, with great deposits of crystals being mined in many of taller peaks. This richness of aether has lead to Stormheight being a seat of technological advancement, with the study of aether being an integral part of its powerful religious structures.

1.1 Religion and society

Stormheight itself is home to the Synod of Inquiry, an organisation dedicated to the reverence of the natural world as a matchless system of harmony (the religion itself is known as the Harmony). The synod is extremely influential, being the ruling body of the city in all but name. The heart of this religious body is a grand campus, where all study of the natural world and its aether is conducted in a suitably reverent manner. Needless to say, scholarship and aethermancy outside of this body is illegal. The rationale being that unrestricted inquiry might lead to disastrous abuses of nature. Under the Harmony, the duty of thinking beings is to match themselves to the harmony of nature, part of this is by achieving “inner harmony”, the other being in harmony with society. Everyone in Stormheight is allocated a role and occupation according to the assessment of the synod. Those who cannot find harmony with their allocated position are confined to asylums or exiled. The influence of the synod is significantly lesser in the countryside, where folk festivals tend to match the religious calender of the Harmony, but the people aren’t really invested in the wider system. Their only encounter with the synod being the yearly arrival of tax men, along with assessors who decide on the future occupations of the village youth.

1.1.1 Class and wealth

Stormheight has no explicit aristocracy, as the structure of the synod is meant to be a meritocracy. However, this tends not to be true in practice, with many influential families rather over-represented in the upper echelons of the synod. Any such familial influence cannot be wielded openly, due to the avowed commitment to merit before birth. This means that politics between families plays out in the decisions and policies of the synod itself.

Stormheight is spatially segregated, with those of higher prestige within the Harmony living closer to the peak of the mountain. Since the Harmony is so inter-woven into every aspect of society, those who rise high within its ranks are also those who accrue the most wealth. The upper ranks of city are populated by those who are given roles of ‘leadership’ or ‘organisation’ by the synod assessors. These are coveted roles as they are viewed as being entrusted with

coordinating the maintenance of harmony between elements of society. As one rises in the Harmony by displaying prowess in ones' given duties, there are a large number of well-off skilled workers and professionals who occupy the middle slopes of the city. The lower slopes are akin to slums and rigorously policed by the Keepers of Order (town guards). Here dwell those who are given manual labour as a life path by the synod assessors. This offers little scope for advancement so the slums are saturated with the dirt and crime that follow in the wake of such dead-end living.

1.2 Living in the highlands

This section will provide some information about how people in the highlands get by day to day.

1.2.1 What people grow and eat

The highlands grow barley and grapes as staple crops. There is little grazing land available so bird-life provides a lot of dietary protein for most people. Meat from cattle or pigs is expensive and imported. Wine is the beverage of choice, it is mostly drunk watered as it is produced with a high alcohol content to aid in preservation.

Currency

The currency in the highlands is called the 'dinar'. These are coins which come in copper and silver varieties. There are 100 copper dinars to a silver. To give an idea of how much the coins are worth you can note that manual labourers make 15 - 25 c per day. A soldier receives a salary of 45 c per day, this is similar to a more skilled labourer.

Cost of living

A loaf of bread, that would constitute a staple food, costs around 12 copper dinars (12 c). A cup of wine ranges in price from 3 c at the low end to around 30 c at the high end. Finally, a hot meal goes for 20 to 40 c, depending on the tavern. Renting an inn room for a night costs between 30 and 60 c. Inns and taverns tend slightly towards the more expensive end of the price ranges in Stormheight itself.

Loaf of bread	12 c
Tavern meal	20 - 40 c
Inn room (per night)	30 - 60 c
Brandy (per cup)	7 - 12 c
Wine (per cup)	3 - 30 c

Table 1.1: Prices of common goods

Trade with the outside world

The highlands trade extensively with the outside world. Trade routes are hard going as one must negotiate many winding mountain passes. This makes imported goods expensive for common folk. Imported food, for instance, is twice as expensive as local fare.

Chapter 2

Aether

Aether is the term used to describe the natural energy that flows throughout the world. All creatures are attuned to aether to some extent, but study and practice can allow one to directly manipulate their own aether, as well as draw it in from their environment. Aether manipulation can create a variety of effects, either aligned to the natural forces or altering the aetheric fields of living creatures.

Aether is thought to be composed of fields, with the physical world being the result of many thousands of such fields interacting. Aetheric fields pulse and vibrate with energy, in turn they are characterised by the frequency of their vibrations. This frequency seems directly linked to the function of the field. For instance, some naturally occurring iron has a particular vibrational frequency that pulls other metal towards it, adding aether to this frequency increases the strength of this effect. A skilled aethermancer could even ‘flip’ the effect so that the metal is pushed away instead. The ability to reverse field functions was conjectured by philosophers to result from a ‘symmetry of fundamental opposites’ that remains a central pillar of aethermantic studies. New vibrations can even be added to existing fields, thus one could even cause a piece of wood to attract metal. An aethermancer performs these feats using their own aetheric field as a tuning fork for other fields, first initiating a vibration in their own field and then imposing it on another field of interest.

Aethermancy is difficult as projecting and controlling one’s own aetheric field is non-trivial and requires extensive practice. Note, however, that anyone can become an aethermancer, just as they could become a swordsman with enough training. This is because aetheric fields constantly interact, an aethermancer is just someone who has learned the skill to actually control the interactions of their body’s own fields.

The constant interaction of aetheric fields means that an aethermancer’s control is always tenuous. They can easily lose control of processes they attempt to change or initiate, sometimes with surprising results. Rules for aethermancy will be discussed in Chapter 6.

2.1 Aether points

Every character’s body has a maximum of 1 aether point at any one time. Any character can spend this on the **Aether Surge** ability. Holding additional points requires a device called an aether capacitor (see Section 6.1.1).

2.1.1 Aether surge

The character concentrates their aether to grant themselves a burst of power. At a cost of 1 aether point they may gain an **Edge** bonus on a roll of their choice.

2.1.2 The energy of life

A character's body uses energy to function, if they run out of aether points they can spend **Endurance** in place of it.

2.1.3 Recharging aether

A one hour rest restores 1 aether point to any character that had none remaining. A hearty meal also restores up to 1 aether point. A full night's sleep restores up to 3 aether points. A character cannot gain aether if they would exceed their allowed maximum.

2.1.4 Aether crystals

Sometimes aether crystallises of its own accord. These crystals can be consumed by anyone to gain aether points. The number gained depends on the strength of the crystal. In addition to this, a character consuming a crystal experiences a rush of life and enhanced sensations for 10 minutes.

Crystal jitters

The consumption of aether crystals is addictive, withdrawal manifesting in the form of uncontrolled shaking motions throughout the victim's body. Each time a character uses a crystal they gain crystal points equal to the gained aether. Crystal points decay at a rate of 1 per week. A character must make a **Resolve** check each day vs 10 + crystal points. If they fail, they are overcome with a need to acquire and use more crystals. This means they have an **Edge** penalty on all checks until they consume a crystal.

Chapter 3

Character creation

These are additional rules providing the options for character species and additional backgrounds in this fantasy setting.

3.1 Character species

3.1.1 Humans

Humans are a dynamic species: adaptive, resilient and, as a group, will always stand firm even against the most difficult odds.

Humans are the most prevalent species in the highlands of Atla, making up the majority of the rural population. Stormheight, however, is considerably more diverse, with lots of peoples of other species both resident and passing through.

The average human lives for up to 80 years, 30 years being considered a mature adult, though humans are considered adults at the age of 16 in most societies. Though they lack the patience and long practice of the Elves they make up for it with a natural ability to adapt quickly to new situations or tasks.

The elves' popular view of humans is that they are flighty and lacking in focus. Mus-folk stereotype humans as grim and unscrupulous. Troggs stereotype humankind as deceitful and conniving.

Flexibility

Humans are extremely adaptable and may select an extra associated skill for their background.

3.1.2 Elves

Though elves somewhat resemble humans at first glance, there is a world of difference on closer examination. Firstly, elves are incapable of digesting meat. They are vegetarian with a preferred diet of sweet, sugary things. Second, their manner of reproduction is completely different, elven eggs gestate externally in a similar manner to those of fish. Additionally elven blood is clear, as it contains no iron, and their hearts are far smaller than that of a man, as capillary action plays a major role in their circulatory systems.

Elves have high cheek bones and very narrow, angular features. Their skin varies in shade between green and light brown with a similar texture to smooth tree bark. Their eyes range in colour from yellow, through green and blue to white, the pupils of which are narrow and cat-like. Elves are short by human standards, and are also of a slighter build. All of them

posses the curious ability to alter their hair colour at will. However, if they are not careful it will change on its own to reflect their mood.

Elves' lives and metabolisms move far more slowly than those of humans and they are children till the age of about 40 years. They grow far more slowly than other species and tend only to reach their full growth by 60 years old. Additionally, they only need to eat or sleep once every two or three days. A small population of Elves exists within the city of Stormheight, but there are several predominantly elven villages around some of the more remote peaks.

Humans tend to stereotype elves as vain, vapid, and hedonistic. Mus-folk and Troggs popularly assert elves to be crazy and lacking in any kind of sense.

Perfectionists

Elves live long lives and thus have time to pursue their skills to a point few others can reach. As such, elves may choose one additional skill **Proficiency**.

3.1.3 Mus-folk

The mus-folk (or 'Musmus' in their own language) resemble large rats. They reach a maximum height/length of 3 - 4 ft and tend to inhabit the margins of human settlements where they are regarded as a mixture of pest and second-class citizen (rude terms for them include 'squeakers' and 'ratties'). Their own language consists of chirps and squeaks rather than words. However, they are fully capable of producing human and elvish speech. When they do, it comes out in a rapid torrent of words infused with poor grammar and often features repetition when they are excited. Mus-folk prefer underground dwellings and make burrows throughout the highland peaks, with a significant population in Stormheight itself. Their prolific digging means they gravitate towards mining for minerals and aether. They are often stereotyped as light-fingered and mischievous by other species.

Sneak & squeak

Mus-folk are naturally stealthy. They may always add **Stealth** to their listed of associated background skills.

Small

Mus-folk are **Small Creatures**, and thus get +1 **Deflect**.

3.1.4 Troggs

Troggs are large (usually 7 ft tall) and bulky, but their most striking feature is their large eyes. Trog facial features tend to be heavy, with wide square jaws and large beak-like noses. Troggs have tough greyish, slightly scaly skin and are in general quite difficult to kill or injure. Traditionally, trogg groups are familial and organised around a mother trogg, a very large and formidable female (female troggs tend to be larger and stronger than males), with a harem of males who care for the young troggs. Plenty of young troggs find this authoritarian system stifling, so they form their own more egalitarian bands which often migrate to settlements like Stormheight. This form of living is scorned and belittled by their elders. Troggs typically prefer dark places, due to their sensitive eyes. This means they tend to live in close proximity to the Mus-folk, often forming a symbiotic system where Troggs provide the muscle and Mus-folk, the cunning.

Other species have a stereotyped view of Troggs as stupid and violent (Mus-folk also view them as useful).

Tough as nails

Trogs are extremely durable and thus have the **Hardy Perk** for free (this adds + 1 **Endurance**).

Dark-dwellers

Trogs have excellent eyesight in the dark as well as sensitive noses. They have an **Edge** bonus on **Awareness** checks in the dark.

3.2 Starting equipment

A new character may choose one piece of armour and up to three weapons from Table 3.1. All characters get a set of clothes.

Table 3.1: New Adventurers Starting Gear.

Name	Power	Hands	Lethality	Notes
Rusty sword	-	1	N	-
Hunting knife	-	1	N	Small
Notched axe	+1	2	N	-
Worn crossbow	+1	2	N	Reload 3, Range 2
Corroded pike	-	2	N	Rending, Range 1
Pitted hammer	-	2/1	N	Penetration 2/1
Aged spear	-	2/1	N	Rending/-
Creaky short bow	-	2	N	Range 1
Old hunting bow	+1	2	N	Range 2, Reload 1
Scarred great sword	+1	2	N	-
Shabby pistol	-	2	N	Penetration 1,Reload 2, Range 1
Ramshackle musket	+1	2	N	Penetration 1, Range 2, Reload 3
Dented shield	-	1	-	Deflect +1

Name	Toughness	Type	Notes
Battered breastplate and mail	+3	M	-
Rusted mail hauberk	+2	M	-
Tattered gambeson	+1	L	-
Travelling clothes	-	-	-

3.3 Additional backgrounds

3.3.1 Student of the synod

The character has spent time studying aether and its powers under the auspices of synod in Stormheight. Associated skills: Aethermancy, Mechanical, Aethertech, Infusary, History, Religion, Plants, Animals.

3.3.2 Savant

The character has learned some of the mysteries of aether on their own. Such individuals often hide their talents from the synod for fear of being forced into conformity or having to leave

their home village. Associated skills: Aethermancy, Infusary, Aethertech, Survival, Persuade, Deceive.

3.3.3 Exile

The character has been exiled by the synod for repeated defiance of the Harmony's dictates. They now skulk on the margins of society, keeping away from the eyes of law enforcement in the far-flung rural districts of highlands. Some such individuals find sanctuary among the Mus-folk, who have little regard for the Harmony or synod, others turn to less than legal ways of making a living in the aethertech black-market. Associated skills: Stealth, Disguise, Deceive, Survival, Slight of hand, Aethertech, Awareness.

3.4 Additional convictions

3.4.1 The Harmony of all

The character is firmly convinced of the teachings of the Harmony. They live their life in pursuit of harmony within themselves and with society as a whole. They tend to regard the synod and its laws as an essential ingredient in achieving harmony with the natural world.

3.4.2 Free spirit

The character detests the enforced conformity that the Harmony brings with it. Having these views publicly known can be dangerous.

3.4.3 Aethermancy unlimited

Aethermancy and aethertech are forces for good, their exploration brings nothing but enlightenment. Some radical individuals might also hold that it should be free from the synod's interference.

3.4.4 Aether exploited

Aethermancy and aethertech go too far in their rampant consumption of the world's aether. One cannot achieve the claimed Harmony while mercilessly extracting resources.

Chapter 4

Perks and proficiencies

4.1 General proficiencies

These perks do **not** occupy equipment slots for passive or active **Perk**, their effect is always active.

4.1.1 Aetheric learning [3]

(Requires **Skill Proficiency: Aethermancy**) This may only be chosen at character creation. This grants the character an aether capacitor that can hold 1 aether point (see Section 6.1.1). Additionally, they may choose one aether manifestation with a cost of 3 experience or less.

4.1.2 Weapon proficiency: X [2]

In this setting, X can be drawn from: unarmed, swords, daggers, axes, blunt weapons, pole weapons, extended weapons, bows, crossbows, slings, and black-powder weapons. A character who is not **Proficient** with his equipped weapon counts his **Aim** and **Power** as -1 .

4.2 Active perks

These open up new actions that a character can make and they must occupy an equipment slot for active **Perks** to be usable.

4.2.1 Heart-seeker [3]

(Requires **Weapon Proficiency: Bows**). A skilled bowman knows just where to place their shots for maximum penetration. An attack with a bow can be declared as a Heart-seeker, in which case it costs 1 extra action point but gains **Rending**.

4.2.2 Main Gauche [3]

There is an art to pairing weapons for fighting with both hands, this character has mastered it. When dual-wielding, the character may elect to use a **Small**, close-combat weapon defensively. The weapon may not make damage rolls but grants an **Edge** bonus to **Deflect** against one attack. This expires if not used within 1 round.

4.3 Passive

These passively enhance the character and must occupy an equipment slot for passive **Perks** to make their benefit usable.

4.3.1 Aetheric mastery [6]

(Requires **Skill Proficiency: Aethermancy**) The character can equip 2 aether manifestations per active perk slot.

4.3.2 Aetheric savant [3]

The character can spend an aether point to gain the benefits of any **Perk** for 1 round.

4.3.3 Reach of the aether [3]

(Requires **Skill Proficiency: Aethermancy**) Aetheric manifestations have + 1 range.

4.3.4 Hammer Time [4]

(Requires **Weapon Proficiency: Blunt**) **Critical Hits** from blunt weapons **Stagger** the victim.

4.3.5 Lethal Flourish [3]

(Requires **Weapon Proficiency: Swords**) The character delivers their finishing blows with the point of a blade. While wielding a sword, the character's attacks gain **Rending** against victims with half, or less, of their **Endurance** remaining.

4.3.6 Momentum [3]

When wielding cleaving weapons, like axes or glaives, the character's attacks gain +1 **Power** if their target failed a **Deflect** check against their attacks last round. This bonus lasts till an attack is **Deflected** or combat ends.

4.3.7 Multi-tasker [5]

(Requires **Skill Proficiency: Aethermancy**) The character has learned to concentrate on many things at once. This allows them to maintain two **Persistent** effects at the same time.

4.3.8 Pole position [5]

(Requires **Weapon Proficiency: Pole Weapons**) The character may use a quarter staff (or other pole weapon) as though it was a dual-ended weapon, gaining an extra damage roll (with no bonuses apart from Trip and Disarm). No **Dual-Wielding** penalties apply when using this **Perk**.

4.3.9 Reloading drill [4]

(Requires **Weapon Proficiency: Crossbow**) The character is well practised at rapidly preparing crossbows to fire. This reduces crossbow **Reload** action costs by 1, to a minimum of 1.

4.3.10 Rifle drill [4]

(Requires **Weapon Proficiency: Black Powder**) Black-powder weapons **Reload** action costs are reduced by 1, to a minimum of 1.

4.3.11 Shield bash [3]

The character can make an attack with their shield, this incurs no dual-wielding penalties. The shield has no bonuses or special effects.

4.3.12 Shield shove [3]

The character may use a shield to **Shove** (add the **Deflect** bonus to such checks).

4.3.13 Signature manifestation [6]

(Requires **Skill Proficiency: Aethermancy**) The character may choose one aetheric manifestation that they know. This has **Edge** on **Aethermancy** checks when manifesting it.

4.3.14 Weapon Specialisation: X [6]

(Requires **Weapon Proficiency: X**) This grants an **Edge** bonus on **Aim** checks with weapons of type X.

4.3.15 Yeoman Bowman [6]

(Requires **Weapon Proficiency: Bows**) Removes the **Reload** time from longbows.

Chapter 5

Character Skills

5.1 Aethermancy (Wit)

This is the skill invoked to produce aether manifestations. More details can be found in Chapter 6.

5.2 Aethertech (Cunning)

This represents a character's knowledge of aether-based technology and other sophisticated devices. A character does **not** need to be an **Aethermancer** to use this skill. Using this skill a character can

- Operate aethertech devices (non-proficient users have an **Edge** penalty)
 - **Critical Failure** means the device fails catastrophically
- Identify functions of aethertech devices (non-proficient users have an **Edge** penalty)
 - Success means the functions are correctly identified
 - **Critical Success** gives the character **Edge** on subsequent checks with the device
 - Failure means the character is unsure about the device
 - **Critical Failure** means the character is confident but wrong about the device

5.2.1 Weapontech

This is an additional function of the aethertech skill, it allows characters to modify equipment with aethertech enhancements. The required materials are aether crystals and precious metals (to conduct aether), the cost of which are listed with each enhancement. A single piece of equipment can only ever have one enhancement. These enhancements cost double the material cost from professional aethertechs.

The enhancement process involves including additional metal structures or pathways to direct or harness the wielder's aether. This can be anything from strange wires and antennae to narrow, inlaid gold and silver veins, or even implanted aether crystals to supply the needed energy.

Arcing (13)

The weapon carries complicated metal architecture that enhances aether emitted by the bearer. Aether manifestations of the wielder may add one extra target. Material cost: 300 s.

Aggression (8)

The weapon feels alive in your hand as aether thrums through inlaid metal veins. The weapon grants +1 **Aim** on its first attack against a given target. Material cost: 60 s.

Culling (11)

The weapon unleashes a burst of aether when it strikes weakened targets. Attacks made against targets which are **Stunned**, **Knocked Down**, or **Bleeding** benefit from a **Lethality** upgrade. Material cost: 240 s.

Deflection (11)

The aether circuits in this weapon create a shimmering field around the weapon that can deflect incoming attacks. This allows the weapon's wielder to make a counter attack if they score a **Critical Deflect**. Cost 240 s.

Devastation (13)

The weapon emits blasts of energy whenever it strikes. The weapon has **Burst** +1. Material cost: 300 s.

Executioner (11)

The weapon has auxiliary systems that kick-in when it inflicts a telling strike to increase its power even further. When the weapon inflicts a **Critical Hit** the wielder is granted an extra damage roll. Material cost: 240 s.

Finesse (9)

The weapon is enhanced with guidance mechanisms to keep the wielder's aim true. **Critical Failures** made with the weapon may be re-rolled. Material cost: 100 s.

Impaling (11)

The weapons stabbing or cutting edges are augmented with active aether blades that bore into the target with a well-placed strike. The weapon gains **Rending**. Material cost: 240 s.

Malevolent (12)

Aether circuits zap the nervous system of its victims. The weapon inflicts an **Edge** penalty to the next **Deflect** check made by its victims. Material cost: 300 s.

Masterful (14)

The weapon generates a resonance with aether manifestations produced by the wearer. The weapon applies an **Edge** penalty to **Resist** attempts made against the wielder's aetheric manifestations. Material cost: 400 s.

Penetrating (9)

The weapon's edge uses aetheric fields to slice through even the thickest armour. The weapon gains **Penetration** + 1. Material cost: 100 s.

Searing (9)

The weapon unleashes searing aether into existing wounds on the target. **Bleeding** targets are **Vulnerable** for 1 round if damaged by the weapon. Material cost: 100 s.

Thirsting (13)

Aetheric circuits draw energy out of targets wounded by this weapon. When the weapon causes at least 1 **Endurance** damage to a victim, the wielder regains 1 missing **Endurance** or aether point. Material cost: 300 s.

Thunderous (9)

Powerful blows from this weapon unleash a booming aetheric disturbance. **Critical Hits** from this weapon knock the victim down. Material cost: 100 s.

Vengeful (12)

The aetheric circuits in the weapon register the signature of targets who have damaged the wielder. The weapons gains an **Edge** bonus to **Aim** and damage rolls against a foe that has damaged you within the last round of combat. Material cost: 140 s.

Vorpal (14)

The weapon is imbued with aetheric fields that disrupt the target, making it far more lethal. Upgrades **Lethality** of the weapon on **Critical Hits**. Material cost: 400 s.

5.2.2 Armourtech

This is an additional function of the aethertech skill, it allows characters to modify equipment with aethertech enhancements. The required materials are aether crystals and precious metals (to conduct aether), the cost of which are listed with each enhancement. A single piece of equipment can only ever have one enhancement. The **Difficulty** of the enhancement is given in brackets after the name. When acquired from professional aethertechs, these enhancements cost double the listed material cost.

The enhancement process involves including additional metal structures or pathways to direct or harness the wielder's aether. This can be anything from strange wires and antennae to narrow, inlaid gold and silver veins, or even implanted aether crystals to supply the needed energy.

Resilient (9)

Aetheric circuitry runs through the armour, disrupting aetheric manifestations. Grants the wearer + 1 to **Resist** checks. Material cost: 100 s.

Feather-light (11)

The aetheric field of the armour makes its wearer lighter. This grants its wearer +1 range to their normal movement. Material cost: 240 s.

Unflinching (13)

An aetheric field generator softens blows dealt to the armour. This armour now negates the first **Endurance** point lost each turn. Material cost: 300 s.

Evasion (10)

A flickering aetheric field surrounds the wearer, making it harder to determine their movements. The armour grants +1 **Deflect**. Material cost: 140 s.

Mirrored (10)

This can only be used upon a shield, it uses aether circuits to make the shield reflect aetheric manifestations. While using the shield, a wielder may use their **Deflect** when making **Resist** attempts against aetheric manifestations. Material cost: 140 s.

5.3 Infusary (Cunning)

Infusary is the craft of creating liquids that resonate with certain aetheric frequencies, achieving dramatic effects when drunk.

An infusion needs a container to hold it as well as aether crystals and a signature ingredient to shape the purpose of the aether. To create infusions a character needs set of glass vessels and equipment for measuring, grinding and heating ingredients (infuser's tools) that can be purchased from an aethertech for 30 silver. Table 5.1 displays some suggested infusions.

Table 5.1: Aether infusions. D is the **Difficulty**, time is how long the effects last and is given in minutes. The cost reflects that of the ingredients for a single draught of potion and the bottle to hold it, double this for the price charged by most infusers.

Potion	D	Effects	Time	Ingredients	Cost
Might	12	+1 Might	10	Troll teeth	5 s
Cunning	12	+1 Cunning	10	Fresh mus-folk whiskers	5 s
Aethermancy	12	Edge bonus - aethermancy	10	Sapphires	6 s
Iron-flesh	8	+1 Toughness	10	Fine granite power	2 s
Fire-blood	9	Enrage	-	Trog blood	4 s
Hawk-eye	10	Edge on Aim	20	Eagle feathers	6 s
Troll-blood	13	Regeneration	5	Troll blood	20 s
Warding	10	Edge on Resist checks	10	Powdered silver	6 s
Invigoration	11	Restore 1 Endurance	-	Mend-well root	4 s
Restoration	9	Cure 1 Condition	-	Common herbs	4 s
Peace	11	Cure all Conditions	-	Nightshade, Mend-well leaves	12 s
Competence	12	Edge bonus on a chosen skill	60	Gold, Silver	40 s
Giant-blood	13	Change size to Large Creature (+1 Might)	10	Giant Blood	40 s
Camouflage	10	Stealth Edge bonus	20	Nightshade, Ivy root	6 s
Invisibility	13	Invisibility	5	Distilled aether	100 s
Haste	13	+1 action point per round	5	Adrenaline	100 s
Explosive	11	radius 0, Burst 1, Power +1	-	Acid, coal, salt-peter	6 s
Aethershot powder	12	1 Aethershot ammunition	-	Black powder	4 s

Chapter 6

Aethermancy

Any character with sufficient knowledge of the flow and hum of the aether can alter the very fabric of the world. The energy for this is drawn from the inner strength of the character themselves. Thus, a character can only exercise this powers sparingly, lest they exhaust the aether powering their body. The use of aether to create external effects is known as “manifestation”. Characters learn new manifestations either through being taught them or by spending experience points to unlock them.

6.1 Aethermantic mechanics

6.1.1 Aether capacitor

A character’s body can only hold so much aether. To transcend this limitation, aethermancers have developed a device called an ‘aether capacitor’ which stores additional aether for them. This device is bulky and has wires running from it various points on the aethermancer’s body. A standard aether capacitor costs 20 s and can hold 1 aether point. For each additional capacity point the cost increases by 60 s. The maximum possible capacity is 4 points.

6.1.2 Producing a manifestation

Manifestations do not require the use of gestures or words, they are produced by the character’s fine control of their own aetheric field. By attuning the vibrations of their bodies own aetheric field, the aethermancer can cascade changes through other nearby fields to produce physical effects. Self-taught aethermancers often use gestures, as the spotty nature of their learning can lead to a personal association between gestures and manifestations. The synod requires its trainees do not use them at all.

Manifestations are actions like any other. However, they also cost 1 point of aether, unless otherwise specified. Manifestations require the user to make an **Aethermancy** check against a **Difficulty** given in brackets on the manifestation description. If the aethermancer succeeds, they and the victim make a **Resist** check to decide the effects. A **Critical Failure** during on the **Aethermancy** check releases aether in an uncontrolled reaction (some suggestions are listed below).

- Manifestation occurs adjacent to the aethermancer instead of targeted area
- Manifestation occurs but changes from targeting enemies to allies or vice-a-versa
- Manifestation occurs but picks a random target
- Manifestation fails producing an aether explosion (radius 0, **Power**+2)

Manifestation time

An aethermancer can elect to reduce the action point cost of a manifestation by 1 (to a minimum of 1), at the cost of an **Edge** penalty on the aethermancy check. Conversely they can increase the cost by 1 to gain an **Edge** bonus. Note that 1 action point equates to roughly 3 seconds of real time.

6.1.3 Resist(X)

A Resist(X) check involves the victim making an opposed roll with their natural attribute X against the aethermancer, who adds -1 or **Might** depending on **Aethermancy** skill **Proficiency**.

6.1.4 Disrupt

An aethermancer can use their own aether to nullify the manifestations of another. This can be used in place of **Resist** or as a 1 action-point, prepared action. **Disrupt** involves an **Aethermancy** check opposed with the other aethermancer. If the check succeeds, the manifestation is nullified.

6.1.5 Persistent manifestations

These have a long duration but require that concentration be maintained to keep them functioning. Thus, only one can be employed at a time. If a character is disabled or killed then their **Persistent** manifestation ends. Otherwise, if they suffer a successful damage roll, they must make a **Resolve** check against 9 plus the **Power** of the attack. If they fail, the **Persistent** manifestation ends.

6.2 Aether manifestations

To represent a character's development in aethermancy they can learn new manifestations by paying the experience point cost listed in square brackets after the name. No manifestations can be learned unless the character has **Skill Proficiency: Aethermancy**. All manifestations cost 1 action point unless otherwise specified. **Persistent** manifestations are marked with P after their **Difficulty**.

6.2.1 Aether siphon (10) [2]

An aethermancer can establish a resonance with another creature such that the aether is stripped from their body. For 2 action points (but no aether points) a chosen target within range 0 (5 m) must **Resist(C)** or lose an aether point. If the target has no aether points, it loses an **Endurance** instead (this cannot be increased by **Critical Success**). If the aethermancer wins the **Resist** check, they gain 1 aether point, failure incurs a **Moment Of Weakness**.

Voracious siphon [4]

The action point cost of **Aether Siphon** is reduced to 1.

6.2.2 Aetheric wall (10,P) [3]

For 1 action point you manifest a wall of shimmering aether around a radius of 5 m (1 combat area) within a range of 2 (25 m). Passing through the wall costs any creature 1 action point and requires a **Resist(M)** check, failure means they cannot traverse the wall and suffer damage with normal **Lethality** (**Critical Success** for the aethermancer on the **Resist** increments the damage severity). This lasts for 10 minutes and is a **Persistent** manifestation.

6.2.3 Animal aether (7) [2]

Every living creature hums with an aetheric field. By carefully tuning your own aetheric field into resonance you can hear the mood and emotions of animals. This lasts for up to 1 hour.

Upgrade: Animal resonance [2]

Your mastery of the aetheric fields of animals allows you to communicate emotions to them as well as attempt to **Persuade** them while **Animal Aether** is active.

6.2.4 Animate homunculus (9) [2]

You can shape a small creature/object out of any given material (30 cm is the maximum size), this is then imbued with aether (you need only make the aethermancy check when creating a homunculus). This grants it a kind of limited life, it can be controlled directly by you (this requires your full concentration). Otherwise it remains inert. A homunculus has no skill **Proficiencies** and cannot inflict damage in combat.

Upgrade: Automaton [3]

Your homunculi are always animated and will obey simple verbal commands. You may have 1 + **Wit** homunculi active at once.

Upgrade: Golem (+3) [4]

The maximum size, for a single homunculus, is increased to medium (man-sized) creatures/objects, these can make unarmed attacks in combat (with **Proficiency**).

6.2.5 Arcing aether (10) [3]

You mould your aether into a resonance with elemental lightning. For 2 action points, aetheric lightning leaps from your body and strikes a target within range 2 (25 m). The target must **Resist(R)** or suffer damage with normal **Lethality**. The lightning then leaps randomly to a second target within range 1 of the first, and a third within range 1 of the second. Any individual target can only be struck once by this manifestation.

Upgrade: Resonant arcing [4]

The lightning gains an extra leap every time it causes damage and targets can now be struck more than once (but cannot be struck twice in a row).

Upgrade: Paralytic arcs [2]

Victims damaged by this manifestation are **Immobilised** for 1 round.

6.2.6 Befuddle (10) [2]

A discordant aetheric projection removes your target's ability to distinguish friends from foes. If the target fails a **Resist(W)** check, they regard all creatures as hostile and dangerous. This means they can panic, run away, or lash-out at anything nearby. The GM should choose combat targets and behaviour for the victim randomly. This lasts up to 1 minute. Each round after the first, the victim may re-attempt to **Resist**.

6.2.7 Bend light (10,P) [3]

Aether flows from your fingers creating an aetheric lattice that bends light. At a distance up to range 1 (15 m), you can create a stationary illusion up to medium size. Anyone looking at this effect must **Resist(W)** to decide if they are fooled. This is a **Persistent** effect. The illusion is only visual, it makes no sounds, smells, and cannot be touched.

Upgrade: Major illusion [3]

You can bend light with such dexterity that you can create illusions up to 5 m in size.

6.2.8 Blinding ray (8) [2]

You pour aether into a light source you touch, focusing its illumination into a searingly bright beam. This **Blinds** a victim that fails a **Resist(R)** check, additionally the normal lighting from the light source is removed for 1 round but the area adjacent to the target is fully illuminated for this time. The blindness lasts 1 additional round per level of **Critical Success** for the aethermancer on **Resist**.

6.2.9 Clinging aether (11) [3]

For 1 action point you blast a 5 m radius (1 combat area) within a range of 1 (15 m) with crackling aether that anchors everything to the earth. All creatures in the area must **Resist(C)** or be **Immobilised** for 1 round (1 additional round per level of aethermancer **Critical Success** on the **Resist** check).

6.2.10 Compel (10) [3]

You project aether into a target by touch, forcing them to make an action chosen by you if they fail a **Resist(W)** check. This fails if the action would harm the target. This is a **Persistent** effect. Specify one extra action per level of **Critical Success** for the aethermancer on **Resist**. The victim is aware that they being forced to act.

Upgrade: Dominate [3]

Your control is so strong that Compel will not fail if the action would be harmful to the victim itself.

Upgrade: Project aether [2]

You can now manifest this power at range 1.

6.2.11 Concussive wave (9) [2]

Your aether blasts out in wave of concussive force. This **Knocks Back** all adjacent creatures and objects (size large or smaller), if they fail **Resist (M)**.

Upgrade: Violent concussion [3]

Victims **Knocked Back** are also **Knocked Down**. If they enter difficult terrain or cover as a result of the **Knock Back**, they suffer damage with normal **Lethality**.

6.2.12 Consuming darkness (10,P) [3]

Light has its own aetheric field and your aether can be used to create a counter vibrating field that extinguishes lights. All light disappears within a chosen radius of 1 (around 15 m). Creatures within the region fight using the **Dark** lighting rules. This lasts until you cancel it.

6.2.13 Damping field (7,P) [2]

For 1 action point you envelope yourself in a high-pressure field of aether that depletes the force of incoming attacks. This manifests as a shimmering in the air around you and increases your **Toughness** by 1. This manifestation lasts for 10 minutes and is a **Persistent** effect.

6.2.14 Discharge (8) [2]

This costs 1 action point and projects your aether out in a searing jet. A chosen target within range 1 (15 m) must make two **Resist(C)** checks or suffer damage with normal **Lethality** for each failure (**Critical Success** for the aethermancer on **Resist** increments damage severity).

Upgrade: Resounding blast [2]

This manifestation now inflicts **Knocked Down** if it causes damage. This only applies to **Large Creatures** or smaller.

6.2.15 Earthquake (11) [4]

You flood the ground with aether, making it roll and buck as though it was alive. For 2 action points you make the ground violently shake. All creatures adjacent to you must **Resist(M)** or be knocked down (you are unaffected). This can be maintained as a **Persistent** effect for up to 1 minute. If the aethermancer moves this manifestation moves with them.

Upgrade: Project aether [2]

You can now manifest this power at range 2 (25 m), instead of shaking the ground adjacent to you. You can change the target area on subsequent turns (once per turn only) for 1 action point.

6.2.16 Eyes of aether (7) [2]

You can alter your senses to perceive flows of the aether. This renders you blind, instead you view the world as the flow of the aether. This costs no aether points to use and may be cancelled at any time.

6.2.17 Fiery surge (10) [3]

You can fuel a flame via aether infusion, greatly increase the intensity of an existing fire within range 1 (15 m). Any creature that makes contact with such a flame (i.e. enters the same combat area) must **Resist(C)** or suffer damage with normal **Lethality**. This fire burns for 2 rounds before going out. This manifestation sets all flammable material within radius 0 (6 m) on fire.

Upgrade: Ravenous flames [3]

The fires burn with greater hunger, gaining **Burst** + 1.

Alternate: Explosive emanation (11) [4]

Instead of intensifying a fire you can cause it to expend all its aether at once in an explosive blast of radius 0 (6 m). Creatures in the blast must make a **Resist(C)** check. Failure inflicts damage with normal **Lethality** (**Lethality** scales with levels of **Critical Success** for the aethermancer).

6.2.18 Fearful frequencies (8) [2]

You bombard a target, within range 1 (15 m), with aetheric vibrations, causing a cloud of fear to pass across the target's mind if they fail a **Resist(R)** check. Such a target cannot approach the aethermancer or remain adjacent to them for 1 minute. Each round after the first the victim may re-attempt the **Resist(R)**.

Upgrade: Terrible tremors [3]

You have learned to afflict the mind with absolute terror. The target of this manifestation suffers an **Edge** penalty to all rolls while this effect persists.

6.2.19 Flare (10) [2]

Projecting aether suddenly into a flame within range 1 (15 m), you cause it to burst into in blinding white flash. Anyone who can see the flare is **Blind** for 1 round and 1 additional round per level of **Critical Failure** on **Resist(M)**. The explosion of the flare itself is harmless.

Upgrade: Burning flare [3]

Flare ignites all adjacent creatures, who suffer damage with normal **Lethality** if they failed **Resist(M)** (**Critical Success** for the aethermancer on **Resist** increments damage severity).

6.2.20 Freezing eruption (11,P) [4]

An icy aetheric field creates a vortex of intense cold. For 2 action points you choose a region of radius 5 m radius (1 combat area) within a range of 2 (25 m) and freezing shards of ice erupt from the ground. Creatures within the area must **Resist(R)** or suffer damage with normal **Lethality**. For 10 minutes the area is **Rough Terrain**, anyone entering, or leaving, the area must **Resist(R)** or suffer damage normal **Lethality**. This is a **Persistent** effect.

Upgrade: Sub-zero [2]

The cost of this manifestation is reduced by 1 action point.

6.2.21 Glacial ray (10) [3]

This costs 2 action points. A ray of freezing aether strikes a target within range 1 (15 m). They must **Resist(C)**, failure means they are **Immobilised** and **Vulnerable** until damaged.

Upgrade: Creeping frost [3]

Glacial ray applies its effects to all creatures adjacent to the primary target.

Upgrade: Deep-freeze [2]

After the effect of Glacial ray ends the ice shatters causing all creatures adjacent to the target take a hit with **Power** +0 and normal **Lethality**.

6.2.22 Grip of the ground (9,P) [3]

The aetheric field of objects can be adjusted so they respond more or less strongly to the pull of ground beneath their feet. If used to reduce a target's weight then their movement speed increases by 1. Such targets also have damage rolls from falling made with an **Edge** penalty. If used to increase an objects weight, they must succeed on a **Resist(M)** check each turn or be **Immobilised**. If the aethermancer achieves **Critical Success** then the target suffers damage with normal **Lethality**. Such targets also suffer an **Edge** bonus on damage rolls from falling.

This lasts a maximum of 10 minutes.

6.2.23 Guided motion (9) [3]

Aether streams out from you to enhance the movements of another body within range 1 (15 m). This confers an **Edge** bonus to an allied target's next **Athletics** or **Deflect** check.

Alternate: Inhibit motion [2]

Guided motion can target an enemy and confer an **Edge** penalty instead, if they fail a **Resist(M)** check.

6.2.24 Ignite (8) [2]

Your aether can generate a resonance between your target and the element of fire. This manifestation can be used on a chosen target within range 1 (15 m). The fire created by Ignite also suffers from normal physical restrictions., i.e. You may not set fire to a creature unless it is naturally flammable, covered in oil, or circumstantially vulnerable. Materials like metals can be heated by this effect to burn their bearer. Setting fire to the clothes of a foe does no great harm to them, and they can extinguish the fire freely on their own turn.

6.2.25 Illuminate (7) [2]

You imbue an object with aether, causing it to resonate with the aetheric field of light. A single small object you touch begins to emit a soft aetheric glow. This provides low-light illumination over a single combat area (around a 5 m radius). This lasts for up to 6 hours.

6.2.26 Iron arm (9,P) [4]

You touch a creature with an aetheric field that resonates with the musculature of their body. A chosen creature within range 1 (15 m) gains +1 **Power**. This is a **Persistent** effect that lasts up to 1 minute.

6.2.27 Ley of the land (10) [2]

You can attune your own aether to the fields within the terrain around you, allowing effortless avoidance of obstructions. This manifestation allows the aethermancer to ignore natural forms of **Rough** or **Dangerous Terrain** effects as well as an **Edge** bonus on **Stealth** and **Awareness** checks while in wilderness. This lasts for 1 hour.

6.2.28 Mimic sound (10) [2]

You subtly leak aether into the air, causing it to vibrate in a chosen pattern. This allows you to produce any sound you can imagine, at volumes between a whisper and a shout. The convincingness of this is decided by results of listeners' **Resist(W)** checks.

6.2.29 Orb of aether (9,P) [3]

You can imbue your aether into the aetheric field of light itself, creating a condensed orb of luminosity. This manifests as floating orb of aether that can move a distance of 15 m (range 1) each turn. The orb provides full illumination within 5 m (1 combat area) of itself and **Low** light within 15 m (radius 1). This lasts up to 1 hour and is a **Persistent** effect.

6.2.30 Overgrowth (11) [3]

Plants have their own variety of aetheric field, you can project your aether into this field to create a resonance. You may choose a region of radius 5 m radius (1 combat area) within a range of 1 (15 m) and make plant growth explode from the ground. This region is now **Rough Terrain**.

6.2.31 Prediction (13) [3]

Time itself resonates with aetheric frequencies. You can use this to attempt to peer into possible futures. This manifestation takes 10 minutes to complete. Afterwards, roll 3d6 and put them to one side. At any point within the next 24 hours you may replace one 3d6 roll (made by any creature or character) with the 3d6 you set aside. On a **Critical Failure** the GM may instead choose when to make the roll substitution. You may only have one such set of predicted dice available at once.

Upgrade: Forecasting [3]

You can store 2 predictions at once.

6.2.32 Pull of iron (9) [3]

The aethermancer tunes the aetheric field of a chosen object within range 1 (15 m) to repel/attract metal. Any creature adjacent to the target must **Resist(M)** or be **Disarmed** of any held metal objects each turn. Dropped metal objects are pushed/pulled a distance 1 away/towards the object. If attract was chosen then there is an **Edge** bonus on **Aim** to hit

it with metal implements. The reverse applies for repel. Creatures in **Medium**, or **Heavy Armour** count the area adjacent to the target as **Rough Terrain**.

6.2.33 Resonant motion (7) [2]

You imbue aether into objects so that their aetheric fields resonate with motion. This allows you to exert the force of a single hand to perform simple actions on an object visible to you within range 1 (15 m).

Upgrade: Major resonance (+2) [5]

The aethermancer is far more attuned to the resonance of motion, allowing for the manipulation of an object with weight up to 10 kg plus 20 kg per point of **Might**. If the object is used as a weapon, it uses the aethermancer's **Aethermancy** for **Aim**. The bonus **Power** of such a weapon is given by the excess lifting force of the manifestation (that not required to actually move the object): + 1 per 10 kg excess. The **Power** for grabbing objects is calculated in the same manner. If multiple objects are controlled, the **Power** bonus from excess lifting force may be divided between them at the aethermancer's discretion. This manifestation requires that the aethermancer to maintain full concentration, in combat they must spend an action point to manipulate objects with this power.

6.2.34 Root weaving (11,P) [3]

By creating a complex aetheric resonance between yourself and nearby plants, you can call on their assistance to entrap foes. Provided there are plants or other natural growths nearby, this can be used to make roots **Grapple** or **Shove** a chosen creature or object within the foliage (this can be used once per turn but costs no action points). The roots use your **Aethermancy** power score when making opposed checks. This is a **Persistent** effect that can be maintained for up to 10 minutes.

Upgrade: Bushwhack [3]

Plants and roots can be made to strike at your foes, using your **Aethermancy** for **Aim**. For an action point you can activate a tree to strike at a nearby foe, this attack has crushing **Lethality**.

6.2.35 Sapping aether (11,P) [4]

You project a discordant aetheric field into a target, weakening their body. If a target within range 1 (15 m) fails a **Resist(R)** check then whenever they lose **Endurance**, they lose 1 additional point. This lasts for up to 1 minute and is a **Persistent** effect.

Upgrade: Field [2]

If used for 2 action points this affects all creatures within a radius of 5 m (1 combat area).

6.2.36 Shape earth (7) [3]

The ground around you has an aetheric field that can be manipulated. A cunning flow of aether allows one to twist the very earth into any desired shape. The aethermancer may touch earth or stone and then manipulate up to 10 kg of earth, or 5 kg of stone, plus 10 kg earth or 5 kg stone per point of **Wit**.

6.2.37 Sonic boom (9) [3]

By tuning your aether to resonate with the field of the air around you, a localised over-pressured pocket of air escapes outwards with a booming crash. This **Staggers** all creatures within a chosen area if they fail a **Resist(R)** check. The chosen area must be within range 1 (15 m).

Upgrade: Thunderous blast [2]

This power now additionally inflicts damage with normal **Lethality** on victims if they failed **Resist** (**Critical Success** for the aethermancer on **Resist** increments damage severity).

6.2.38 Stone sense (7) [2]

Your expert knowledge of aetheric vibrations allows you to extend your hearing through a continuous stone (or earthen) surface or structure. For this purpose, a wall of stone bricks is continuous but soil and dirt do not count (they do not conduct vibrations coherently enough). This power lasts for up to 1 hour.

6.2.39 Stone skin (8) [3]

Manipulating the aetheric field of rock, you draw stone from the ground to clad you in armour. For 1 round damage rolls against you suffer a **Lethality** downgrade (to a minimum of normal).

Upgrade: Earth-clad [2] (P)

This makes **Stone Skin** a **Persistent** effect that lasts up to 10 minutes.

6.2.40 Strange attractor (11,P) [4]

An intricately twisted pattern of aetheric fields creates a point that draws in all nearby objects. Choose a point within range 2, this point becomes an aetheric singularity. Any creature (**Large Creatures** or smaller) within range 1 of the singularity must succeed on a **Resist(M)** check at the start of their turn or be pulled a distance of 1 towards it then **Immobilised** for 1 round. On a **Critical Failure** any held weapons or objects are pulled from their grip. Any creature that spends a whole round within the singularity suffers damage with normal lethality. All objects of size large or smaller size are also pulled in.

6.2.41 Suggestion (10) [3]

A creature's own aetheric field can be altered with aether to make its mind more open and malleable. Make a single-sentence suggestion of an action to the target, on a failed **Resist(W)** check they follow the suggestion willingly and rationalise it to themselves. This suggestion will automatically fail if it would be harmful to the victim themselves or their friends/allies. Specify 1 additional suggestion per level of **Critical Success** for the aethermancer on **Resist**.

Upgrade: Manipulation [3]

Your mastery of the aetheric fields in brains allows you to implant beliefs or feeling into a target via suggestion. In addition suggestion no longer fails if it would be harmful to the victims friends/allies.

6.2.42 Time warp (12) [5]

Projecting your aether towards another creature, you make its own aetheric field discordant with the flow of time. Choose a creature within range 1 (15 m) to either gain or lose an action point each turn until the effect ends (maximum duration 1 minute). Targets may **Resist(R)** each turn to end the effect. Only one action point may be gained or lost each turn in this way. **Critical Success** for the aethermancer on **Resist** means the target cannot attempt **Resist** next turn.

Upgrade: Field [2]

If used for 2 action points this affects all creatures within a targeted radius of 5 m (1 combat area).

6.2.43 Transfix (11) [3]

You project your aether into a creature, disrupting its aetheric field to fill its mind with a deluge of sensory information. A single target within range 1 (15 m) must **Resist(R)** or stand transfixed (no actions allowed) for 10 minutes. A **Resist** attempt may be made at the end of each turn to end the effect. This is **Persistent** effect and any damage ends the effect immediately.

Upgrade: Field [2]

If used for 2 action points this manifestation affects all creatures within a radius of 5 m (1 combat area).

Upgrade: Amplification [3]

If the victim of this effect is damaged, the manifestation lingers for 1 round before ending.

6.2.44 Vortex (8) [3]

Infusing a sudden burst of aether into the air creates a resonance that roars out as a powerful vortex of wind. This reverses the flight of projectiles entering a target region within range 1 (15 m) for 1 round.

Upgrade: Howling winds [2]

Vortex can be manifested with ferocious winds that knock down all creatures in the target area if they fail a **Resist(M)** check.

6.2.45 Warp space (12) [5]

You create an aetheric resonance around a creature, warping the aetheric field of space itself. For 1 action point you can move a target creature, which can attempt to **Resist(C)** if it wants to. This moves the target a distance up to range 2 (25 m). This cannot affect targets more than 1 size category larger than the aethermancer without 1 level of **Critical Success** for the aethermancer on **Resist** per size additional category difference.

6.2.46 Weather sense (7) [2]

You attune to the aetheric fields of air and water, thus you can predict the weather up to 1 day + **Wit** in advance.

Upgrade: Weather touch [4]

Your mastery of air and water allows you to nudge the weather. This lets you alter the weather, with the effect occurring after 5 - X days where X is the number of aether points spent on this manifestation.

Chapter 7

Arms and Armour

7.1 Weapon Special Rules

7.1.1 Multi-Edged

A weapon like this has many different naughty ends. Which bit is being used must be decided before rolling each attack.

- Axe blade: +1 **Power**
- Heavy blade: **Massive Damage**
- Hammer: **Penetration 2**
- Spear tip: +1 **Aim** and **Rending**
- Hook: **Disarm**

Lombard axe

Axe blade and hammer.

Glaive

Axe blade and spear tip.

Halberd

Spear tip, axe blade, and hook.

Lucerne hammer

Spear tip, hammer, and hook.

Pole-axe

Spear tip, heavy blade, and hammer.

7.1.2 Pike

Pikes are so long that they receive an **Edge** penalty on **Aim** against targets within range 0.

Table 7.1: Close-combat Weapons. Note that L signifies **Lethality**, A is **Aim**, D is **Deflect**, and P is **Power**. Pen indicates the **Penetration** effect and MD is **Massive Damage**.

Name	Cost	Hands	L	A	D	P	Special
Daggers							
Dagger	2 s	1	N	-	-	-	Small, Throw 2
Stiletto	3 s	1	N	-	-	-	Small, Rending
Sword Breaker	3 s	1	N	-	-	-	Small, Disarm
Swords							
Side-Sword	10 s	1	N	-	+1	-	- Rending MD Cumbersome
Longsword	12 s	2/1	N	-	+1	+1/-	
Saber	15 s	1	N	-	+1	+1

Flail	12 s	1	N	-	-	+1	Trip, Disarm
Grand Flail	20 s	2	N	-	-	-	MD, Trip, Disarm
Whip	1 s	1	N	-	-	-1	Trip, Disarm, Range 1

7.1.3 Lance

A lance gains bonus **Lethality** during a mounted charge action.

Table 7.2: Ranged Weapons. Note that L signifies **Lethality** and P is **Power**. Pen indicates the **Penetration** effect and MD is **Massive Damage**.

Name	Cost	Hands	Range	Reload	L	P	Special
Slings							
Short Sling	10 c	1	3	1	N	+1	
Long sling	10 c	1	5	1	N	-	
Bows							
Short Bow	10 s	2	4	-	N	-	-
Long Bow	15 s	2	6	1	N	+1	-
Cross Bows							
Hand Crossbow	15 s	1	1	-	N	-1	Small
War Crossbow	25 s	2	5	2	N	-	MD
Repeater Crossbow	30 s	2	4	2	N	-	Burst 1
Heavy Crossbow	50 s	2	5	3	C	-	-
Black Powder							
Pistol	25 s	1	3	1	N	-	Pen 2, Small
Musket	50 s	2	6	2	N	+1	Pen 2
Blunderbuss	50 s	2	4	3	N	-	Cone, Pen 2
Bomb	10 s	1	3	-	N	-	Burst 1, Thrown, Radius 0, MD

7.1.4 Slings

These are rotational sling weapon consisting of a long loop of cord and a pouch that holds and launches a stone or lead projectile. They count as throwing-type ranged weapons.

7.1.5 Bows

Bows are shooting-type weapons.

7.1.6 Crossbows

All crossbows are shooting weapons.

Hand Crossbow

These diminutive weapons are designed to be easily concealed and to unloaded at close range into an unsuspecting victim. As such, they are **Small** and fast firing but are still tricky to reload when used in pairs (requiring a 1 action **Reload**).

7.1.7 Blunderbuss

This weapon fires a scatter of shot in a cone, hitting up to 2 targets in a single combat area. The user can also declare using it point blank within range 0, then it hits one target only but has **Burst** +1.

7.1.8 Aethershot ammunition

This is special ammunition for black-powder weapons, infused with aetheric energies to increase its destructive potential. A shot made with such ammunition gains a **Lethality** increase.

Table 7.3: Basic Armour

Name	Cost	Type	Toughness
Light Armour			
Gambeson	5 s	L	+ 1
Mail shirt	25 s	L	+ 2
Medium Armour			
Mail hauberk	40 s	M	+3
Brigandine and mail	60 s	M	+4
Heavy Armour			
Plate cuirass and mail	90 s	H	+5
Full Plate	120 s	H	+6
Barding (Horse)	150 s	H	+4

Table 7.4: Shields

Name	Cost	Deflect	Special
Shield	10 s	+2	-

7.2 Armour Special Rules

7.2.1 Putting On and Removing Armour

Even heroes seldom sleep in full-plate armour, so there are then times when the speed at which a character puts on or removes armour might matter. It requires four action points to put on **Light Armour** or two to strap on a shield. However, it takes 1 minute to put on **Medium Armour** but it takes 5 minutes to put on **Heavy Armour**, which also requires that the wearer has assistance in putting it on. **Medium** or **Light Armour** can be put on in a rush, doing so means that armour might not be precisely adjusted in order function to it's full effect, this takes only four action points for medium armour or two action point for **Light Armour**, but reduces the **Toughness** of the armour by 1 while it is worn in this sloppy fashion.

Removing **Light Armour** takes 1 minute, **Medium Armour** takes 2 minutes, and **Heavy Armour** takes 5 minutes to remove.

7.2.2 Shields

Shields add a + 2 bonus to the bearer's **Deflect** score.

7.3 Weapon Enhancements

A weapon may have one of the enhancements listed below.

7.3.1 Masterful quality

This grants the item + 1 **Power** or **Aim**. This triples the cost of the item.

7.3.2 Expanded Bolt Rack

(Crossbow only) The weapon is fitted with expanded armatures and space for two bolts. It can thus fire two bolts with a single trigger release. This grants **Burst** + 1 on attacks made with the crossbow. Cost: Base cost x 3 + 20 s.

7.3.3 Special Payload

(Crossbow only) The armatures and bolt track of the bow are modified to carry larger and heavier bolts. This configures the crossbow to fire specialised ammunition that can carry explosives (bomb from infusary - Section 5.3), chains/ropes/nets, or poisons and other chemicals that spray in a radius of 0 around the impact point. Cost: 100 s.

7.3.4 Experimental Chamber

(Black Powder Weapons only) The weapon can hold reserve ammunition that it is not currently firing. This reduces the **Reload** time of the weapon by one rank (reduce paired pistols to **Reload 2**) to a minimum of 1. However, if the user scores a raw 5- with the weapon, roll 3d6. On a score of 8- the weapon needs 50 s worth of repairs before it works again, on 9+ it jams requiring 1 action point be spent to clear the jam. Cost: 200 s.

7.3.5 Extra Barrel

(Black Powder Weapons only) The weapon is fitted with an extra barrel. The gun may be fired twice before re-loading but reloading time increases by 1 action point. Cost: 60 s.

7.4 Armour Enhancements

Armour may have one of the enhancements listed below.

7.4.1 Masterful quality

This grants the item + 1 Toughness. This doubles the cost of the item.

7.4.2 Heavily reinforced

The armour is carefully enhanced to maximally redistribute impact. This incurs a -1 **Burst** penalty (minimum 1 damage roll) to any attacks made against the wearer. Cost: 70 s. **Medium** or **Heavy Armour** only.

7.4.3 Cunning Strappage

Careful use of straps and weight distribution makes the armour feel so light you could dance in it (this is still not recommended). This negates a chosen **Edge** penalty incurred by the armour. Cost: 60 s. **Medium** or **Heavy Armour** only.

7.4.4 Knuckle-Blades

Punching people is easier with steel blades on the knuckles of your gloves. This grants + 1 **Power** to unarmed damage rolls. Cost: 10 s.

7.4.5 Armour Spikes

Sharpened protrusions or heavy studs set in the surface of the armour can make attacking the wearer a real hazard. This can be applied to any **Medium** or **Heavy Armour** piece, enemies attempting to grapple with the wearer have an **Edge** penalty to **Grapple** checks. Note this does not apply if the wearer is the one attempting the grapple. Cost 12 s.

Chapter 8

Other Equipment

8.1 Cost

This cost reflects an average price that the item would be purchasable for, from a merchant. This cost can go up and down dependent on how well a player haggles and on the circumstances of the city and/or merchant; that is, if something is in shortage it costs a lot more, or if the merchant is desperate to sell, the price goes down. A player can sell an item for a price dependent on the condition of the item, a merchant will offer him half the normal cost for a used item in good condition.

8.2 Equipment

8.2.1 Tools

Bandages

Required by a healer to use his healing skill, each use of the skill consumes a bandage.

Infuser's tools

A complex piece of equipment that allows an infuser to purify and distil various liquids, this is required for the creation of infusions (see Section 5.3).

Glass Vial

A simple glass vial with a stopper, used to hold liquids, this is needed to hold any brew created by an infuser (see Section 5.3).

Lock-pick

A small piece of cunningly bent metal that can be used to open a lock with a Mechanical skill check opposed to the **Difficulty** of the lock, on a failure the lock-pick breaks.

Musical Instrument

A simple instrument for making music.

Wood Axe

An axe for chopping up wood.

Master-Crafted Tools

These are finely crafted versions of any type of tool, this adds an **Edge** bonus to any rolls made using the tools.

8.2.2 Adventuring Gear

Backpack

A large but otherwise conventional satchel.

Barrel

A large wooden barrel, bound with iron rings. The barrel can hold about 50 litres.

Basket

A simple wicker basket for carrying small loads.

Candle

A small candle that produces **Low** light in a 6 m radius, this candle can burn for up to 3 hours.

Canvas

A sheet of water-proof canvas. The price depends on the size of the sheet.

Chain

A metal chain made up of heavy steel links, the chain is strong enough to support very large weights, up to 500 kg.

Crowbar

A simple steel crowbar used for levering open doors or hinges. Using a crowbar adds an **Edge** bonus to rolls made using your Might to force open any hinged container or door.

Firewood

Wood for keeping a fire burning for one day.

Fishing Tackle

A fishing line, a hook, sinkers and lures. This can be used to attempt to catch fish with the **Survival** skill, the **Difficulty** of this is dependent on the speed of the water and type of the fish.

Grappling Hook

A heavy iron hook used for scaling near vertical surfaces. This hook will hold the attached rope in place after being successfully thrown to the point you wish to climb to. The hook also makes an effective weapon.

Hammer

A simple hammer for hitting stuff and pitching tents.

Ladder

A length of ladder which can be climbed without needing an Athletics check.

Lantern

A hooded lantern used for projecting **Full** light directionally, up to 13 m from the bearer. This uses 0.5 kg of oil to burn for 24 hours.

Lantern oil

Enough oil to power a standard lantern for 24 hours. Highly flammable.

Mirror

A simple shiny surface (glass or metal) that reflects light. Useful for looking around corners.

Needle

A sharp needle for use in sewing or stitching wounds.

Paper

A single sheet of paper for writing on.

Pick

A simple pick used for breaking earth or skulls.

Pole

A length of wooden or metal pole.

Pot

A cooking pot, about 30 cm in diameter.

Quill

A feather quill used for writing.

Rope

A length of rope capable of supporting the weight of three people (~250 kg).

Sack

A large rough cloth bag.

Spade

A digging implement (can be used to hit people as well).

Spyglass

A telescope capable of magnifying things from up to a mile away.

Tent

A canvas tent to keep you dry at night, this can house up to two man-sized creatures.

Tinder Box

A small box containing fast lighting twigs, used to rapidly start a fire.

Torch

Provides **Full** light up to a 6 m radius and **Low** light within 12 m. The torch can burn for 4 hours.

Trail Rations

Generally dried meat, bread and cheese. Long lasting food-stuffs to nourish a traveller.

Water-Skin

A hide bag used for carrying water, this carries water for one person for 5 days.

8.2.3 Mounts**Pony**

A small hard working pony, capable of carrying an full grown small creature or the child of a man sized creature. A pony has a combat movement distance of 2. Such a creature can carry weights of up to 100 kg while still being to walk or trot all day with no appreciable strain. Carrying weights of 150 kg or more risks injuring the horse if done for prolonged periods. This horse is not trained for war and may panic, it has Deflect 0 and Toughness 8.

Light Horse

A swift if none too tough horse, a Light Horse has a combat movement distance of 4. A light horse can gallop up to 2 hours a day at a speed of five times faster than a man, any longer risks injuring the horse. This horse can only move a distance of 2 per movement action while carrying a heavily-armoured rider. A light horse can carry weights of up to 80 kg while still being to walk or trot all day with no appreciable strain. Carrying weights of 130 kg or more risks injuring the horse if done for prolonged periods. This horse is not trained for war and may panic, it has Deflect 0 and Toughness 9.

Cart Horse

A heavy farm horse capable of carrying heavy loads and working all day, however, it is not capable of maintaining very rapid speeds. A Cart Horse has a combat movement distance of 2. A cart horse can carry weights of up to 200 kg while still being to walk or trot all day with no appreciable strain. Carrying weights of 300 kg or more risks injuring the horse if done for prolonged periods. This horse is not trained for war and may panic, it has Deflect -1 and Toughness 11.

Heavy Horse

A strong and reasonably quick horse. This horse can carry a man in heavy armour while moving at full speed. This horse has a combat movement distance of 3. Such a creature can carry weights of up to 120 kg while still being to walk or trot all day with no appreciable strain. Carrying weights of 200 kg or more risks injuring the horse if done for prolonged periods. This horse is not trained for war and may panic, it has Deflect -1 and Toughness 10.

Destrier (War Horse)

A heavy horse trained for battle, the destrier is by far the largest breed of horse, standing over 2 metres at the shoulder. Its war training makes it a savage weapon in its own right and it has close-combat Aim +1, Deflect 0, Toughness 10, Power +1, and combat movement range 3. A destrier can carry weights of up to 200 kg while still being to walk or trot all day with no appreciable strain. Carrying weights of 300 kg or more risks injuring the horse if done for prolonged periods.

Simple Saddle

A rough worked leather saddle, needed for sitting astride your mount. A saddle is fastened with girth buckles and has attached stirrups.

War Saddle

A heavy saddle needed to support a fully-armoured knight, this saddle is designed also to allow the knight to wield a lance one handed.

Racing Saddle

A saddle built for race horses, it is light weight and fine craftsmanship add 1 to the horses' combat movement distance.

Tack

Reins, bit, bridle and other equipment necessary for riding a mount. Riding bareback increases the **Difficulty** of all ride checks by 2.

Feed

Food for a mount for one day.
